Unit: Introduction to Forensics

Essential Questions
What is Forensic Science?
What is deductive reasoning
What is the Federal Crime lab?
What services does the Federal Crime lab offer?
What is the job of a Forensic scientist?
What are other Forensic science services?
What are types of Forensic evidence?
What is the difference between individual and class evidence?
What are the steps used to approach a crime scene?
How is a crime scene reconstructed?
Discuss the case of “Lyle and Louise” with students and student theories, such as how the events detailed in the Investigation may have occurred and their possible relation to one another.

Kidnapping case Poster rubric |  

| Reading Standards for Literacy in Science |  
1. Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.  
2. Determine the central ideas or conclusions of a text; summarize complex concepts, processes, or information presented in a text by paraphrasing them in simpler but still accurate terms.  
7. Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem proficiently.  
10. By the end of grade 12, read and comprehend science/technical texts in the grades 11–CCR text complexity band independently and proficiently | Lesson on crime scene evaluation  
I’m Clueless: A lesson on Deductive Reasoning  
I’ve Got My Eye On You: A Lesson on Observing, Remembering, and Recording Events |  

| Writing Standards for Literacy in Science |  
1. Write arguments focused on discipline-specific content.  
a. Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing |  
Case study on “some headache” parts 1-5  
Term 1 project a report and Poster on a Kidnapping case |
claims, and create an organization that logically sequences the claim(s), counterclaims, reasons, and evidence.

b. Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant data and evidence for each while pointing out the strengths and limitations of both claim(s) and counterclaims in a discipline-appropriate form that anticipates the audience’s knowledge level, concerns, values, and possible biases.

c. Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.

d. Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.

e. Provide a concluding statement or section that follows from or supports the argument presented.

2. Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.

a. Introduce a topic and organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.

b. Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience’s knowledge of the topic.

c. Use varied transitions and sentence structures to
link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.

d. Use precise language, domain-specific vocabulary and techniques such as metaphor, simile, and analogy to manage the complexity of the topic; convey a knowledgeable stance in a style that responds to the discipline and context as well as to the expertise of likely readers.

e. Provide a concluding statement or section that follows from and supports the information or explanation provided (e.g., articulating implications or the significance of the topic).

4. Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

5. Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.

6. Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.

8. Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the specific task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.

10. Write routinely over extended time frames (time for reflection and revision) and shorter time frames (a single sitting or a day or two) for a range of

### Forensic Science

#### Essential Questions
- What is Forensic Anthropology?
- What are the fields of Forensic anthropology?
- How do you determine if bones are human?
- How to determine age, sex, height, and race using bones?
- How to estimate time of death using bones?
- Explain how DNA is used in bone analysis?
- What is the structure and function of DNA?
- What is DNA Fingerprinting and Gel Electrophoresis?
- How is Gel Electrophoresis run?
- How is DNA Fingerprinting and Gel Electrophoresis used in a case study?
- Explain how DNA is collected at a crime scene.
- Explain why DNA amplification is necessary and how PCR amplification works.
- Analyze a gel electrophoresis, using instastain, in real time.

9. Draw evidence from informational texts to support analysis, reflection, and research.

Forensic Science
Unit: Analyzing Documents
Essential Questions
What is Forgery?
What types of documents can be forged?
How are forgeries discovered?
Who confirms forgeries and what are the punishments for forgeries?
What are the 12 handwriting characteristics?
How are handwriting samples taken?
What is paper chromatograph?
How and why are chromatography done?
What are questioned documents?

3. Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks; analyze the specific results based on explanations in the text.

8. Evaluate the hypotheses, data, analysis, and conclusions in a science or technical text, verifying the data when possible and corroborating or challenging conclusions with other sources of information.

1. Write arguments focused on discipline-specific content.
   - e. Provide a concluding statement or section that follows from or supports the argument presented.

2. Write informative/explanatory texts, including the narration of historical events, scientific procedures/experiments, or technical processes. e. Provide a concluding statement or section that follows from and supports the information or explanation provided (e.g., articulating implications or the significance of the topic).

4. Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

7. Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.

---

**Forensic Science**

**Unit: Fingerprinting**

**Essential Questions**
Explain the fundamental principles of fingerprinting.  
What are the three classes of fingerprints?  
What methods are available for detecting fingerprints?  
How are fingerprints taken and processed?

<th>Writing Standards for Literacy in Science</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Write arguments focused on discipline-specific content.</td>
</tr>
<tr>
<td>a. Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences the claim(s), counterclaims, reasons, and evidence.</td>
</tr>
<tr>
<td>b. Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant data and evidence for each while pointing out the strengths and limitations of both claim(s) and counterclaims in a discipline-appropriate form that anticipates the audience’s knowledge level, concerns, values, and possible biases.</td>
</tr>
<tr>
<td>c. Use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships between claim(s) and reasons, between reasons and evidence, and between claim(s) and counterclaims.</td>
</tr>
</tbody>
</table>
d. Establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing.

e. Provide a concluding statement or section that follows from or supports the argument presented.

2. Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.

a. Introduce a topic and organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a unified whole; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.

b. Develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience’s knowledge of the topic.

c. Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among complex ideas and concepts.

d. Use precise language, domain-specific vocabulary and techniques such as metaphor, simile, and analogy to manage the complexity of the topic; convey a knowledgeable stance in a style that responds to the discipline and context as well as to the expertise of likely readers.

e. Provide a concluding statement or section that follows from and supports the information or explanation provided (e.g., articulating implications or the significance of the topic).

4. Produce clear and coherent writing in which the development, organization, and style are
appropriate to task, purpose, and audience.
5. Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.
6. Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments or information.
7. Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.
8. Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the strengths and limitations of each source in terms of the specific task, purpose, and audience; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.
9. Draw evidence from informational texts to support analysis, reflection, and research.
10. Write routinely over extended time frames (time for reflection and revision) and shorter time frames (a single sitting or a day or two) for a range of discipline-specific tasks, purposes, and audiences.
### Forensic Science

#### Unit: Blood Detection and Evidence Analysis

**Essential Questions**
- What is blood?
- What are the components of blood?
- How is blood typed?
- Describe several presumptive tests for blood detection.
- How is a case processed using blood?
- What actions should be avoided when collecting blood evidence?
- How is the evidence protected and handled while collection is taking place?
- Explain the chain of custody for the evidence.

Unit: Gunshot Analysis

Essential Questions
- Explain which characteristics can aid in detecting a specific Firearms?
- What are the components of a bullet cartridge?
- Compare and contrast different types of bullets
- What is a caliber?
- Compare and contracts rifle and bullet marks .
- How can gunshot residue be used to determine firing distance?
- What tests are used to determine the existence of Gunshot residue?

Forensic Science

Unit: Drug Analysis
Essential Questions
What is Toxicology?
Explain the role and responsibilities of a forensic toxicologist.
What are some effects of toxins to the body?
Explain where the best places to test for toxins are located in the body.
List and explain some common testing procedures for toxins.
Describe several familiar toxins and their effects.
Compare and contracts depressants and stimulants.

### SIS 2  Design and conduct scientific investigations.
- Articulate and explain the major concepts being investigated and the purpose of an investigation.
- Pose questions and form hypotheses based on personal observations, scientific articles, experiments, and knowledge.
- Identify independent and dependent variables.
- Write procedures that are clear and replicable.
- Employ appropriate methods for accurately and consistently:
  - Making observations.
  - Making and recording measurements at an appropriate level of precision and:
  - Collecting data or evidence in an organized way.
- Properly use instruments, equipment, and materials (such as scales, probe ware, meter sticks, microscopes, computers, etc.) including: set-up, calibration (if required), technique, maintenance, and storage.
- Follow safety guidelines.
- Video Clip for Lyle and Louise case.
- Movie: Forensic Firsts – Proving Poison.

### SIS 3  Analyze and interpret results of scientific investigations.
- Present relationships between variables in appropriate forms.
- Use the results of an experiment to develop a conclusion to an investigation that addresses the initial questions and supports or refutes the stated hypothesis.
- State questions raised by an experiment that may require further investigation.
**Reading Standards for Literacy in Science**

3. Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks; analyze the specific results based on explanations in the text.

8. Evaluate the hypotheses, data, analysis, and conclusions in a science or technical text, verifying the data when possible and corroborating or challenging conclusions with other sources of information.

**Writing Standards for Literacy in Science**

1. Write arguments focused on discipline-specific content.
   - Provide a concluding statement or section that follows from or supports the argument presented.

2. Write informative/explanatory texts, including the narration of historical events, scientific procedures/experiments, or technical processes.
   - Provide a concluding statement or section that follows from and supports the information or explanation provided (e.g., articulating implications or the significance of the topic).

4. Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

7. Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.

---

**Forensic Science**

**Unit: Mock Trial**

**Essential Questions**

**What are the procedures for trial of criminal cases and the simplified rules of evidence?**
Explain how the US court system functions.
Explain the roles of each of the participants during the trial.

|---|---|---|---|
| **Reading Standards for Literacy in Science** | 5. Analyze how the text structures information or ideas into categories or hierarchies, demonstrating understanding of the information or ideas.  
8. Evaluate the hypotheses, data, analysis, and conclusions in a science or technical text, verifying the data when possible and corroborating or challenging conclusions with other sources of information.  
9. Synthesize information from a range of sources (e.g., texts, experiments, simulations) into a coherent understanding of a process, phenomenon, or concept, resolving conflicting information when possible. |  | The Mystery of Lyle and Louise Mock Trial |
| **Writing Standards for Literacy in Science** | 1. Write arguments focused on *discipline-specific content*.  
a. Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences the claim(s), counterclaims, reasons, and evidence.  
b. Develop claim(s) and counterclaims fairly and thoroughly, supplying the most relevant data and evidence for each while pointing out the strengths and limitations of both claim(s) and counterclaims in a discipline-appropriate form that anticipates the audience’s knowledge level, concerns, values, and possible biases. |  | The Mystery of Lyle and Louise Mock Trial |
